

BIOMOVER

Biotechnological degreasing

BIOTECHNOLOGICAL SPECIALITIES

GROUPS

BIOREMOVER is one of the new generation of **BIOTEL** products that combine the effectiveness of traditional chemical solutions with the advantages provided by biotech components, such as enzymes.

BIOREMOVER is a liquid biological formula that contains a natural solvent derived from plant matter and associated with biodegradable surfactants and enzymes.

Its strong, balanced composition makes **BIOREMOVER** the most suitable product for degreasing all kinds of greasy surfaces, including kitchens, walls and floors. Its high concentration means that it can be dissolved in up to 20 times its own volume. It effectively replaces the use of alkaline products and solvents.

BIOREMOVER can be used in manual, automatic or ultrasonic degreasing machines.

ADVANTAGES

Product with strong degreasing capacity.
Can be diluted in large amounts of water (up to 20 times its volume).
Economical to use.
Does not contain acids or alkalis, or chlorinated solvents.
Highly biodegradable.

DOSAGE AND INSTRUCTIONS FOR USE

BIOREMOVER is an enzymatic detergent that does not contain microorganisms and therefore is suitable for use on surfaces that are in contact with foodstuffs. It does not contaminate surfaces microbiologically, or the foodstuffs that could be handled on them.

The precautions that should be taken are the same as with any other kind of product: surfaces should be rinsed thoroughly to avoid chemical contamination of foods.

Use **BIOREMOVER** pure or diluted up to 5% in water, depending on how much dirt needs to be removed. Apply, leave to act for several minutes and rinse thoroughly with (preferably warm) water.

BIOREMOVER can be applied using a mechanical brush.

Filters or other elements with a high amount of dirt encrusted could be treated by immersing in a solution of **BIOREMOVER**, preferably in warm water.

CHARACTERISTICS

- | | |
|---------------|-------------|
| – Appearance: | Blue liquid |
| – Odour: | Orange |
| – pH: | 8.0 – 9.5 |

SAFETY

Neutral product, to be handled with the same precautions as any concentrated detergent/degreasing agent. In the event of contact with skin or eyes, wash thoroughly with water.

At normal dosages, **BIOREMOVER** solutions are not aggressive to metal surfaces, cement, tiles or plastics. However, they should not be in prolonged contact with waxed or varnished surfaces.

For further information, see the product's safety data sheet.

PACKAGING

Boxes containing 12 one-kilogram bottles.

Non-returnable packs.
